AB A method for selectively separating and purifying RNA from a mixture solution of nucleic acid containing DNA and RNA is provided. The method comprises the steps of adsorbing nucleic acid, washing, subjecting to a DNase treatment, washing and desorbing the RNA from a nucleic acid-adsorbing porous membrane by a recovering solution, wherein a total amount of a DNase solution is 130 mL or less per 1 cm<sup>2</sup> of the membrane. The washing solution contains a water-soluble organic solvent having a concentration of 50% by weight or less, and does not contain a chaotropic salt. Also part of the apparatus are a container, and a device for creating pressure gradient such pump. Purification of DNA by adsorption on 100% surface saponified acetyl cellulose is described.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB An object of the present invention is to provide a method for separating and purifying a nucleic acid by adsorbing the nucleic acid in a test sample to a surface of a solid phase and desorbing the nucleic acid by washing and the like. The present invention provides a method for separating and purifying RNA from a nucleic acid mixture, comprising a step of: adsorbing and desorbing a nucleic acid in the nucleic acid mixture containing RNA and DNA to and from a solid phase of an organic macromolecule.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.
